Management of long-term COVID-19 sickness absences

Introduction

As part of the emergency response to the COVID-19 pandemic, the Department of Health and Social Care (DHSC) introduced temporary workforce guidance (“the guidance”) in March 2020 as part of its strategy to support workforce leaders and NHS staff to respond to the pandemic. The guidance aimed to support infection control measures and the health, safety, and well-being of NHS staff.

The DHSC first wrote to the joint chairs of the NHS Staff Council on 13 April 2022 setting out their intention to withdraw the guidance. This was followed by confirmation, issued on 29 June 2022, that this would take effect from 7 July 2022. Following instruction from the DHSC, the NHS Staff Council have produced separate guidance to support employing organisation manage this withdrawal.

The NHS Staff Council has produced the following guidance to help employers and trade union representatives with supporting staff during the management of long term COVID-19 sickness absences.

Long term COVID-19 related sickness absence

Research suggests that most people can expect to recover from COVID-19 within two to three weeks with data suggesting that around 10 per cent of people suffer symptoms for more than three weeks. DHSC analysis of unpublished management information data, extracted from the NHS Electronic Staff Record HR and Payroll system, indicates that the average duration of disease amongst NHS staff is similar to that seen elsewhere. Estimates suggest that around 93 per cent of absences related to COVID-19 sickness lasted for less than 30 days and over 99 per cent lasted for less than three months. We are aware, however, that for a small number of staff this has lasted for a longer period. These include:

- Staff who have become seriously ill through COVID-19 and suffer long term absence with the need for extended recovery and rehabilitation.
- Staff who have experienced lingering symptoms after a COVID-19 infection resulting in continuous or intermittent absences related to their original episode – what is commonly known as Long Covid.
For many individuals, Long Covid presents as relapses of a range of symptoms whilst others struggle with a single symptom\textsuperscript{ii}. At this early stage, the long term impacts of COVID-19 are not fully understood; particularly for cases of severe COVID-19 illness. Further research is required to better understand the impacts and treatment options.

**Purpose of this guidance**

Employing organisations are encouraged to adapt the principles of their local sickness management policy in order to manage long term COVID-19 absences and to provide the necessary support to staff to aid their recovery and rehabilitation. The advice of occupational health experts will help support conversations between individuals and their line managers in assisting a safe and smooth return to the workplace. This should include consideration of any recommended reasonable adjustments\textsuperscript{iii}.

Each case will need to be managed in a supportive and sensitive manner. Information on the transition to contractual arrangements, including disregarding sickness absence (in relation to pay and/or sickness absence triggers) for those in receipt of COVID-19 sick pay is covered in the guidance produced by the NHS Staff Council following the withdrawal of the DHSC guidance. A ‘bespoke’ or individually tailored approach should apply to the management of Long Covid and other longer COVID-19-related absences.

**Key principles**

The following principles have been developed to support employers in managing longer term COVID-related sickness absences. Where individuals wish to have the support of their trade union representative, this will need to be facilitated, including through early and sensitive conversations with the individual concerned.

- **Risk assessments**: ensuring individual risk assessments\textsuperscript{iv} are undertaken and regularly reviewed.

- **Occupational Health**: securing occupational health advice is central to the management of individual cases and should be sought as early as is reasonably practical. Their advice will guide conversations between the individual and the employing organisation and help to manage expectations in relation to what is and is not possible.

- **Phased return to work**: should support individuals to work towards fulfilling all their duties and responsibilities. A flexible approach may be required, specifically to extending a phased return\textsuperscript{v} period for longer than a standard policy allows. This can
include the exploration of modified shifts, reduced and flexible hours. When supporting a phased return, the NHS terms and conditions of service handbook (Annex 26) makes provisions for staff to receive their normal pay.

- **Reduced or amended duties**: explore whether the individual’s existing duties could be reduced or amended (temporarily or permanently, taking into account the needs and wishes of the individual) to facilitate a return to work. Conversations to explore how duties may be adapted to enable individuals to work from home for a specified period may be required. Temporary changes should be reviewed intermittently and to consider a return to normal duties.

- **Redeployment**: to support the retention of staff, redeployment on a temporary or permanent basis, may need to be considered, taking into consideration the needs and wishes of the individual. This should be explored as an alternative to ill health retirement.

- **Rehabilitation**: identifying appropriate treatments and interventions to support staff return to work at the earliest opportunity. In relation to Long Covid this includes the option to refer individuals to rehabilitation\(^{vi}\) and Long Covid clinics\(^{vii}\) to support the management of their symptoms, both physical and psychological.

- **Equality Impact Assessments**: As defined by the *Equality Act 2010*, an individual has a disability if they have a physical or mental impairment which has a substantial and long-term detrimental impact on their ability to carry out normal day to day activities\(^{viii}\). Consequently, Long Covid may be considered as a disability under the terms of the Equality Act\(^{ix}\).

- **Ill Health retirement**: For those in the NHS Pension, provisions exist within the scheme which can be used as a mechanism to support individuals who, despite best efforts of both parties, are not able to return to work due to permanent ill health. Where conversations of this nature take place, the involvement of the individuals trade unions representative, where requested, should be facilitated. Full details about the benefits of the [NHS Pension scheme]\(^{x}\) should be made available to individuals to ensure they have all the necessary information to make an informed decision. Applications can be made before a decision to leave employment is made and may help the individual in their decision making.
